Felgo Cross-Platform SDK & Tooling w.r.t Advanced Mobile Radiology & Informatics Platforms Design Using Intel Movidius + Raspberry PI + QRNG/Devices & Services + Bosch XDK-IoT + HPC Heterogeneous Systems – A Simple Suggestion to TEST the Interesting Features of Novel Medical Imaging Algorithms.**[Exploring with Qt/C/C++/Ruby/mruby].**

[Understanding Shannon Entropy in the context of Machine Learning/AI Using Above Mentioned Idea]

Nirmal – Informatics R&D – ante Inst UTD Dallas TX USA **–** hmfg2014@gmail.com

[I] Main Idea + Inspiration + Introduction :

“Artificial intelligence and smart applications are steadily becoming more popular. Companies strongly rely on AI systems and machine learning to make faster and more accurate decisions based on their data. This example shows how to create apps that take advantage of both QML and Qt C++.

TensorFlow is Google’s open machine learning framework. Its flexible architecture allows easy deployment of computation across a variety of platforms (CPUs, GPUs, TPUs), and architectures (desktops, clusters of servers, mobile and edge devices).This example integrates TensorFlow with Felgo and provides Image Classification and Object Detection features.

For the full integration guide how to use TensorFlow with Qt and Felgo, see: https://felgo.com/cross-platform-development/machine-learning-add-image-classification-for-ios-and-android-with-qt-and-tensorflow. For more information about creating Apps with Felgo, see here: https://felgo.com/apps/.”

[IV] Acknowledgment/s : Non-Profit R&D. Inspire Others Always. Thanks to all.

[V] Conclusion/s With Future Perspectives : One of the pioneering R&D Efforts w.r.t Mobile Radiology & Informatics Using C/C++/Ruby/mruby with a multi-disciplinary background. We are certain this R&D Short Technical Notes would trigger lot of interesting ideas to probe the frontiers of Advanced Medical Imaging.

[THE END]
